

5% WINDSCREEN + 5% HOOD EFFECT ON NBL (TOTAL PROJ WEIGHT CONSTANT):

0.03-1.5-CALIBER PLATE & 0-80° OBLIQUITY

This windscreen is a standard sheet-metal, mild-steel, curve-sided, hollow cone with a thick ring at this lower edge with threading to screw onto the Hood. Below 0.03-caliber STS plate, the windscreen remains intact during penetration and the effects become those of a longer, streamlined nose, not windscreen or Hood damage (different kind of effect).
